

EBSCO Discovery Service

Integration of all library resources on one platform
EBSCOhost

OCLC Report from 2010 r. „Perceptions of libraries 2010: Content an Community”

Where the university and college students start their search for information?

• Search engines	83%
• Wikipedia	7%
• Social networking site	2%
• E-mail	1%
• E-mail subscription alert	1%
• Online database	1%
• Ask-an-expert site	0%
• Library Website	0%
• Online bookstores	0%
• Topic-specific Website	0%

Perceptions of Libraries, 2010: Context and Community

OCLC Report from 2010 r. „Perceptions of libraries 2010: Content an Community”

Where the university and library students find online information?

• Search engines	93%
• Wikipedia	88%
• Online bookstores	79%
• Online news	69%
• Library Website	58%
• E-journals	39%
• Online database	30%

OCCLC Report from 2010 r. „Perceptions of libraries 2010: Content an Community”

Students and researchers start search for information in search engines (mostly Google) because they are:

- faster
- easier to use
- more comfortable
- realiable
- 43% of students believe that information found in the library resources is more reliable than found in search engines, 53% think that it is the same reliable, and 7% think that it is less reliable
- 27% of students were redirected to the library Website from the search engines
- 99% of students, that visited the Library Website found the needed information there

Inne

Zintegrowane przeszukiwanie większości e-zbiorów UW oraz Katalogu Bibliotek UW.

 Wejście z komputerów domowych dla pracowników i studentów UW [\(Więcej\)](#)

Nowość! Multiwyszukiwarka na UW. Jedno okienko - wiele widoków.

Wpisz hasło wyszukiwawcze ze swojej dziedziny i sprawdź jak to działa! Multiwyszukiwarka daje możliwość przeszukania większości baz udostępnianych na UW oraz katalogu Bibliotek UW. Odnajdziesz publikacje na potrzebny Ci temat szybko, łatwo i w jednym miejscu.

Odkryj każdą z czterech nowych zakładek: 1. multiwyszukiwarkę, 2. szybki dostęp do listy czasopism elektronicznych A do Z, 3. wyszukiwanie w katalogu (na takiej samej zasadzie jak na Facebook'u BUW) oraz 4. Inne - e-książki i bazy, których nie uwzględnia multiwyszukiwarka.

Instrukcja wyszukiwania

Mija półtora miesiąca odkąd w BUW działa multiwyszukiwarka. Czy przydaje się ona do Państwa pracy naukowej? Czy warto, aby zagościła w BUW na stałe? Potrzebna jest Państwa opinia, dlatego prosimy o wypełnienie do 12 czerwca krótkiej ankiety.

EBSCO Discovery Service

EDS: Why...

- Libraries & their content providers are competing with the “open web” for the attention of end users
- EDS was created in an attempt to help libraries & their content providers compete with Google (including Wikipedia) for the attention of students and even many faculty
- The need for a discovery service becomes very clear when analyzing the perception of students:
- In a recent OCLC report: “College Student Perceptions” (<http://www.oclc.org/reports/perceptionscollege.htm>) they found that only 30% of college students used the library’s online resources

Question: In students' minds, what are three ways the "open web" (i.e., Google, etc.) is better than libraries?

Answer:

1.) A single search box for everything

2.) Real-time news

3.) A massive encyclopedia (Wikipedia) with entries in English (3,679,000), German (1,257,000), French (1,124,000), and 32 other languages

Single Search Box

- Google is the single gateway to all things free
- EDS is the single gateway to all things vetted

What is EDS doing to counter Google News?

- EDS will all have real-time news as of October 2011
- Sources will include:
 - AP (Associated Press)
 - UPI (United Press International)
 - CNN Wire
 - Canada Wire
 - Xingua (China)
 - BusinessWire
 - PR Newswire
- AP is the most important newswire,
and it is no longer available via Google News

What is EBSCO doing to counter Wikipedia?

EDS is building an unprecedented collection of high quality encyclopedias from:

Academic Encyclopedia Publishers:

- ABC-CLIO – signed
- Cambridge – signed
- Elsevier – signed
- Oxford – signed
- Sage – signed
- Springer – signed
- Taylor & Francis – signed
- Wiley Blackwell – signed

General Encyclopedia Publishers:

- Britannica – pursuing
- Grolier – verbal agreement
- World Book – signed

EBSCO's Discovery Definition

- Fast, simple access to all of the library's full-text content (electronic and print) in a single search box
 - Journals
 - Magazines
 - Newspapers
 - Books
 - Library Catalog
 - And any other important source type...

The Library Catalog is Loaded

- Real-time availability checks
 - Daily updates for catalog changes
 - Everything indexed in the catalog will be available for discovery searching
-

Non-Journal Publisher Partners Are Included (as in all discovery services)

- Accessible Archives
- ABC-CLIO
- Alexander Street Press
- ARTstor
- arXiv
- Baker & Taylor

Statistics Show an Increase of Overall Collection Usage with EBSCO Discovery Service

Sample of subject-specific database usage at Millersville University of Pennsylvania

When a library buys EDS, even if they have no databases from EBSCO, they get ALL of the indexing and abstracts from ALL of the following databases:

- *Academic Search Complete*
- *Business Source Complete*
- *Caribbean Search*
- *Central & Eastern European Academic Source*
- *Fonte Academica*
- *Fuente Academica Premier*
- *MasterFILE Complete*
- *Newspaper Source Plus*
- *Political Science Complete*
- *Selected additional A&I*

NOTE: The full A&I is actually exposed and available for guest access (i.e., unauthenticated users)

Metadata in EBSCO Discovery Service Compared

by Jody Condit Fagan, James Madison University

ALA Annual Conference 2010

Summary

The same searches were conducted using each of the four major discovery services and based on the relevance of results retrieved and an analysis of the metadata, the following was concluded:

EBSCO Discovery Service: Uses both subject indexing from controlled vocabularies, as well as publisher-provided content (author-supplied abstracts, author keywords, and full text)

Other Discovery Tool 1: Does not use index content (a.k.a., subject indexing from controlled vocabularies), and instead uses publisher content (usually not full text), which may vary from publisher to publisher

Other Discovery Tool 2: Relies primarily on “citation-only” data (a.k.a., table of contents searching / article title searching)

Other Discovery Tool 3: Is almost not even a discovery tool, although it is marketed as such – it’s more of an enhanced, faceted library catalog, plus a federated search tacked on

The following is a record in Primo Central (using CrossRef)

ecological niche modelling
fragmentation
Lycaenidae
microsatellites
mountain regions

Abstract: The climate **warming** of the postglacial has strongly reduced the distribution of cold-adapted species over most of Central Europe. Such taxa have therefore become extinct over most of the lowlands and shifted to higher altitudes where they have survived to the present day. The lycaenid butterfly *Lycaena helle* follows this pattern of former widespread distribution and later restriction to mountain areas such as the European middle mountains. We sampled 203 individuals from 10 populations representing six mountain ranges (Pyrenees, Jura, Massif Central, Morvan, Vosges and Ardennes) over the species' western distribution. Allozyme and microsatellite polymorphisms were analysed to study the **genetic status** of these highly fragmented populations. Both molecular marker systems revealed a strong **genetic** differentiation among the analysed populations, coinciding with the orographic structure and highly restricted gene flow among them. The large-scale **genetic** differentiation is more pronounced in allozymes (F_i 0.326) than in microsatellites (R_i 0.113), but microsatellites show a higher resolution on the regional scale (R_i 0.082) compared with allozymes (F_i n.s.). For both analytical tools, we found private alleles occurring exclusively in a single mountain area. The highly fragmented and isolated occurrence of populations is supported by the distribution pattern of potentially suitable climate suggested by species distribution models. Model projections under two climate **warming** scenarios predict a decline of climatically suitable areas, which will result in the extinction of most of the populations showing unique **genetic** characteristics.
