Dr. Paweł Szczesny - an active researcher in area of systems biology and at the same time an open science advocate. Advises on Open Access to UNESCO and on broad open science issues to Open Society Foundations. Member of Open Science Working Group of Open Knowledge Foundation. Director of Systems Institute, private non-profit organization which builds social and technical infrastructure for open science. Research activities take place at Institute of Biochemistry and Biophysics PAS, and at University of Warsaw.

Abstract:
"Open Science. What's in it for me?" is a workshop targeted at early career researchers. Its aim is to make its participants more aware of ongoing developments in the broad area of open science (including, but not limited to Open Access, citizen science and Open Educational Resources) and to help them to include these developments in the process of career planning. During the workshop we will attempt to address the issues of scooping, trust, transparency and visibility in the context of opening research outputs, inputs and the research process itself.
